Introduction

Monday, 20 September 2021 07:00 (5 minutes)

Over the years OpenPrinting has been actively working on improving and modernizing the way we print in Linux. We have been working on multiple areas of printing and scanning. Especially driverless print and scan technologies have helped the world do away with a lot of hassles involved in deciding on the correct driver to use and to install the same. Users can now just plug in their printer and do what they need.

So what next in Open Source Printing?

I agree to abide by the anti-harassment policy

I agree

Presenter: BASU, Aveek

Session Classification: Open Printing MC

Track Classification: Open Printing MC
