Next steps for futex2

Tuesday, 21 September 2021 09:00 (35 minutes)

The community has an agreement that a new futex syscall is needed to add new features to help with performance and scalability issues. However, after some patches proposed with different implementations approaches, the path to get it merged is not clear. The goal of this session is to get maintainers and developers together to figure out which is the best approach to make progress in the new interface.

I agree to abide by the anti-harassment policy
