

Common Test Report Database (KCIDB)

Wednesday, 22 September 2021 08:05 (25 minutes)

Join to hear about the next KCIDB release, new features and plans, including the new report format and subscription/notification system. Provide feedback and discuss ideas for further development. Get help submitting your data or joining the development.

KernelCI's KCIDB is an effort to unify kernel test reporting schema and protocol, and provide a service for aggregating, analyzing, reporting, and accessing test results received from various Kernel testing systems. We are already receiving data from ARM, Gentoo's GKernelCI, Red Hat's CKI, Google's Syzbot, Linaro's Tuxsuite, and of course the native KernelCI tests, and we're working on receiving data from more systems.

See our dashboard at <https://kcidb.kernelci.org/>
