

XFS Roadmap Planning

Tuesday, 21 September 2021 10:30 (30 minutes)

This is a BOF for people to get together to discuss unresolved issues in the community and to talk about the roadmap for new feature development and ongoing technical debt payoff. We have not had such a forum since LSFMM in 2018.

Roadmap topics include:

- Shrink
- Online Repair
- Reflink and Reverse Mapping on the Realtime Device
- The future of RT and Quota
- Parent Pointers
- Centralizing Administration Tools

This forum is open to all filesystem developers, though the focus is very obviously on XFS.

I agree to abide by the anti-harassment policy

I agree
