

# Invited talk: The Thread wrapper for Rust in Linux kernel

*Tuesday, 14 September 2021 11:00 (45 minutes)*

A kernel thread is one of the most important components in the kernel, and it's also a necessary piece to implement other core subsystems in the kernel. This topic will share a learning process on how to implement the wrapper for Rust std-like Thread in Linux kernel, the current status and the future work.

**Presenter:** FENG, Boqun

**Session Classification:** Kangrejos
