Documentation for OpenPrinting projects

Wednesday, September 14, 2022 5:30 PM (30 minutes)

Good documentation is something neglected a lot in the free software world. One is driving the coding of certain projects quickly forward to get something which actually works and one can try it out. One wants to get one's new library finally released. But how should people know how to use it? Documentation! CUPS is well documented, but cups-filters (and pappl-retrofit) lack API documentation. Also the user documentation on the sites of distributions like Debian or SUSE are often much better than our upstream documentation. Here we will discuss how to solve this. API documentation generators for libraries? Upstreamizing documentation from distros to OpenPrinting? ...?
