LoongArch: What we will do next

Tuesday, 13 September 2022 12:00 (30 minutes)

- cleaner way forward for compatibility with the “old-world” (the earlier in-house MIPS-clone firmware and kernel ABI of LoongArch), if possible;
- cleaner approach to support both standard UEFI and the Loongson-custom boot protocols, if possible;
- way forward for supporting zboot in EFI stub boot flow.

I agree to abide by the anti-harassment policy

Yes
