Abusing zephyr and meta-zephyr

Wednesday, 14 September 2022 11:00 (30 minutes)

This talk will talk about the work done to switch from cmake to west in meta-zephyr and how I leveraged this work to do bad things with zephyr and meta-zephyr to generate Yocto Project machine definitions for meta-zephyr. We’ll discuss why these patches are not zephyr upstreamable and why autogenerated machine definitions are not included in meta-zephyr.

I agree to abide by the anti-harassment policy

Yes
