Secure Boot auto enrollment

Monday, 12 September 2022 10:40 (35 minutes)

Based on a current systemd PR (https://github.com/systemd/systemd/pull/20255) that I submitted, I would like to talk about auto enrollment of Secure Boot.

I would be especially glad to have feedback on any unanticipated issues. Also it is a systemd PR, I think it fits the system boot and security micro conference as it deals with Secure Boot.

One major issue already identified is proprietary signed option ROMs and the rather low deployment of UEFI audit mode.

I agree to abide by the anti-harassment policy

Yes
