Hermetic builds with Bazel

Tuesday, 13 September 2022 15:30 (15 minutes)

Starting with Android 13, Android Kernels can be built with Bazel. While under the hood this still uses KBuild as the authoritative build system, the guarantees a Bazel build provides are very valuable for building GKI kernels and modules. This talk will explore the Bazel based kernel build and the Driver Developer Kit (DDK) that provides a convenient way to create kernel modules in compliance with GKI.
