Coccinelle for Rust

Wednesday, 15 November 2023 15:20 (25 minutes)

Coccinelle is a tool for making widespread searches and changes in source code. Coccinelle was originally developed for C code and has been extensively used in the Linux kernel. We are working on porting Coccinelle to Rust, based on the infrastructure provided by Rust Analyzer. This talk will present the current state of the tool, with the goal of getting feedback from developers interested in Rust for Linux.
