DTrace and eBPF: new challenges

Tuesday, 14 November 2023 17:20 (20 minutes)

The presentation will present a brief technical status update on the project and then delve into the pitfalls we have encountered in the past months. Creative solutions for some problems will be presented, but the bulk of the presentation is focused on current unresolved pitfalls. The goal is to spark creative discussion towards resolving some of the issues we have encountered and to work towards proposing improvements to eBPF and other kernel tracing features to the benefit of tracing in Linux in general.
