

Linux Plumbers Conference 2023

Contribution ID: 131

Type: **not specified**

Embedded Linux BOF

Wednesday, 15 November 2023 14:30 (45 minutes)

This session will be a discussion of the current status of technology areas related to embedded Linux. Specific technology areas that are candidates for discussion are system size, boot time, power management, realtime performance, embedded-related filesystems, memory technology devices, embedded busses (i2c, spi, etc.), build systems, and architecture support. Other topics may be discussed, as driven by the interest and concern of the attendees. The goal of the session is to identify current areas of work, and coordinate plans for collaboration, by various stakeholders in the embedded Linux ecosystem.
