How to make syzbot reports easier to debug?

Wednesday, 15 November 2023 10:15 (45 minutes)

Syzbot is a continuous kernel fuzzing system that publishes hundreds of auto-generated bug reports each year.

If you have ever tried to address a syzbot report, what did you miss most? What pieces of information that we share only create noise. And, on the other hand, what automatically extractable data could have helped you spend less time debugging?

Please feel free to share your experience and suggestions during this BoF session. This information will help us adjust syzbot to the needs of the community.
