A kernel documentation update

Wednesday, 15 November 2023 10:15 (45 minutes)

The documentation discussion at past kernel summits has been lively, so I think we should do it again. Some topics I would bring to a session this year would include:

- The ongoing restructuring of the Documentation/ directory. I've been slowly moving the architecture docs into Documentation/arch/, but would like to do more to reduce the clutter of the top-level directory and make our documentation tree more closely resemble the organization of the source.

- Structure. We continue to collect documents, but do little to tie them together into a coherent whole. Do we want to change that and, if so, how?

- Support for documentation work. There is nobody in the community who is paid to put any significant time into documentation, and it shows. How can we fix that?

- Infrastructure. Sphinx brings a lot but is far from perfect; what can we do to improve it?

Other topics will certainly arise as well.
