

# Producing a complete Linux system with a single command (and configuration file) with Yocto

Alexander Kanavin  
[alex@linutronix.de](mailto:alex@linutronix.de)  
[alex.kanavin@gmail.com](mailto:alex.kanavin@gmail.com)

All of Yocto on one diagram

- available in master / scarthgap
- prototype code in review

## Bitbake-setup (Prototype! Subject to change!)

<https://github.com/kanavin/bitbake>

- List
  - Lists available configurations
- Init
  - Initializes a yocto build using a specified configuration
- Status
  - Checks if the configuration has been updated upstream
- Update
  - Updates a previously initialized configuration

## Configuration repository (also a prototype!)

<https://github.com/kanavin/bitbake-setup-configurations>

 <b>Alexander Kanavin</b> Add two sample configurations (kirkstone tip, alex's custom) 	7dc66af · 4 months ago	 3 Commits
 LICENSE	Initial commit	4 months ago
 README.md	Create README.md	4 months ago
 poky-alex.conf.json	Add two sample configurations (kirkstone tip, alex's custom)	4 months ago
 poky-kirkstone.conf.json	Add two sample configurations (kirkstone tip, alex's custom)	4 months ago

## Configuration (a prototype too!)

```
1  {
2    "sources": {
3      "poky": {
4        "git-remote": {
5          "remotes": {
6            "origin": {
7              "uri": "git://git.yoctoproject.org/poky-contrib"
8            }
9          },
10         "rev": "akanavin/sstate-for-all"
11       },
12       "path": "poky"
13     }
14   },
15   "description": "Poky reference distribution, with alex fixes",
16   "configuration": {
17     "bitbake-setup": {
18       "default": {
19         "description": "Default build configuration",
20         "template": "poky-default",
21         "targets": ["bitbake core-image-minimal"]
22       }
23     }
24   },
25   "version": "1.0"
26 }
```

## Demo!

```
$ git clone https://github.com/kanavin/bitbake
```

```
$ bitbake/bin/bitbake-setup list
```

```
$ bitbake/bin/bitbake-setup init poky-alex
```

```
$ /home/alex/builds/poky-alex/build/build.sh
```

(when this completes, there will be a complete Linux system produced from source!)

```
$ bitbake/bin/bitbake-setup status ~/builds/poky-alex/
```

```
$ bitbake/bin/bitbake-setup update ~/builds/poky-alex/
```
