Continuously testing the Linux kernel

Friday, 20 September 2024 17:00 (45 minutes)

The KernelCI community is quite lively lately, so we want to take the opportunity to bring everyone interested in kernel testing together in the same room to discuss key priorities for the community. We invite kernel maintainers and developers, product developers, CI systems developers and different projects caring about testing, regression tracking and integration of the kernel.

How to facilitate the kernel community engagement with testing? How to get more benefits from the common database for test results with KCIDB? How to improve the quality of the tests? How to get to evergreen CI pipelines? So let's discuss and figure out how each of us can help improve the Linux kernel integration across the ecosystem.
