Linux Kernel Debugging & Drgn BoF

Thursday, 19 September 2024 15:45 (45 minutes)

This BoF will be an opportunity to discuss Linux kernel debugging tools, with a primary focus on Drgn. Discussion will be attendee-driven, some example discussion topics could be:

- Ready-made examples of using drgn to debug a vmcore or live kernel built with virtme-ng.
- Discussion on writing good drgn helpers, and writing more debuggable kernel code.
- New features in recent drgn releases, upcoming changes, etc.

However any kernel debugging discussion would be welcome and encouraged!

Primary author: BRENNAN, Stephen (Oracle)

Session Classification: Birds of a Feather (BoF)
