

Kernel documentation

Thursday, 27 August 2020 08:00 (45 minutes)

The long process of converting the kernel's documentation into RST is finally coming to an end...what has that bought us? We have gone from a chaotic pile of incomplete, crufty, and un-integrated docs to a slightly better organized pile of incomplete, crufty, slightly better integrated docs. Plus we have the infrastructure to make something better from here.

What are the next steps for kernel documentation? What would we really like our docs to look like, and how might we find the resources to get them to that point? What sorts of improvements to the build infrastructure would be useful? I'll come with some ideas (some of which you've certainly heard before) but will be more interested in listening.

I agree to abide by the anti-harassment policy

I agree
