BoF: KernelCI Unified Reporting in Action

Thursday 27 August 2020 07:00 (45 minutes)

See the Kernel CI's new Unified Reporting in action: from multi-CI submission, through common dashboards and notification subscription, to report emails.

Explore and discuss the report schema and protocol. Learn how to send testing results, using your own, or example data. Help us accommodate your reporting requirements in the schema, database, dashboards and emails.

Bootstrap automatic sending of your system's results to the common database, with our help. Discuss future development, dive into implementation details, explore and hack on the code, together with the development team.

I agree to abide by the anti-harassment policy
