

Project Ranger Update

Monday, August 24, 2020 9:00 AM (25 minutes)

The Ranger project was introduced at the GNU tools Cauldron last year. This project provides GCC with enhanced ranges and an on-demand range query API. By the time the conference is on, we expect to have the majority of the code in trunk and available for other passes to utilize.

In this update, we will:

- Cover what has changed since last fall.
- Describe current functionality, including the API that is available for use.
- Plans going forward / Whats in the pipe.

I agree to abide by the anti-harassment policy
