

TuxMake and TuxBuild

Dan Rue <dan.rue@linaro.org>

Antonio Terceiro <antonio.terceiro@linaro.org>

Hi, the build fails for me
with the following error!

defconfig

gcc 9

mips.

I can't reproduce. What
kernel config did you use?

I can't reproduce. What
compiler?

I can't reproduce. What
architecture?

Linux Kernel Building Problem Statements

- Build environments are not reproducible
- Build environments are not portable
- Building the matrix of toolchains x architectures x configs x targets non-trivial
- Each toolchain, architecture, config, and target being built has user-space requirements
- Managing build artifacts can be messy
- Automating of the above is usually DIY and non-portable
- Making build artifacts available for testing is non-trivial
- Build coverage is generally constrained by hardware and integration effort

What if we could version and distribute build environments similarly to how we version Linux source code?

What if we weren't constrained by build capacity?

Introducing TuxMake

- Open source, MIT licensed
- Thin wrapper around Linux kernel builds
- Python based command-line tool and library
- Provides portable and hermetic docker-based build environments
 - Pristine build containers contain kernel building requirements and nothing more; debian-based
- Provides common interface to building across architectures, toolchains, configs, and targets
- Collects artifacts in common location per-build; kernel source is read-only
- 100% unit and integration test coverage, requires only python core libraries
- Written and maintained by Antonio Terceiro <antonio.terceiro@linaro.org>

Opinionated Defaults - build everything; native arch

```
$ tuxmake
# command line: tuxmake
make --silent --keep-going --jobs=72 O=/home/dan.rue/.cache/tuxmake/builds/1/tmp defconfig
make --silent --keep-going --jobs=72 O=/home/dan.rue/.cache/tuxmake/builds/1/tmp
grep -q CONFIG_MODULES=y /home/dan.rue/.cache/tuxmake/builds/1/tmp/.config
make --silent --keep-going --jobs=72 O=/home/dan.rue/.cache/tuxmake/builds/1/tmp modules
make --silent --keep-going --jobs=72 O=/home/dan.rue/.cache/tuxmake/builds/1/tmp modules_i
tar caf /home/dan.rue/.cache/tuxmake/builds/1/tmp/modules.tar.gz -C /home/dan.rue/.cache/t
test -d arch/x86_64/boot/dts
# Skipping dtbs because precondition failed
I: config: PASS in 0:00:01.308105
I: kernel: PASS in 0:00:52.821837
I: modules: PASS in 0:00:02.641460
I: dtbs: SKIP in 0:00:00
I: build output in /home/dan.rue/.cache/tuxmake/builds/1
$
```

Build in Docker using '--runtime docker'

```
$ tuxmake --runtime docker
# command line: tuxmake --runtime docker
Using default tag: latest
latest: Pulling from tuxmake/x86_64_gcc
Digest: sha256:5a9fb76b7c5725725235e5d76b3e5cef0765a57a4db68fcdd1c2deb45638aa61
Status: Image is up to date for tuxmake/x86_64_gcc:latest
docker.io/tuxmake/x86_64_gcc:latest
make --silent --keep-going --jobs=72 O=/home/dan.rue/.cache/tuxmake/builds/2/tmp defconfig
make --silent --keep-going --jobs=72 O=/home/dan.rue/.cache/tuxmake/builds/2/tmp
```

- Requires docker to be available
- Each 'make' command happens transparently in an ephemeral docker container
- Source and output paths are mounted in; build runs as your uid
- x86_64 and arm64 native containers provided by default for each supported cross-build target architecture and toolchain

Build arm64 with clang-10 using Docker

```
$ tuxmake --runtime docker --toolchain clang-10 --target-arch arm64
# command line: tuxmake --runtime docker --toolchain clang-10 --target-arch arm64
Using default tag: latest
latest: Pulling from tuxmake/arm64_clang-10
Digest: sha256:e8128416588564c2a3294d8be1690799bd46b9349bbb7160e61a8a0dfc9d2023
Status: Image is up to date for tuxmake/arm64_clang-10:latest
docker.io/tuxmake/arm64_clang-10:latest
make --silent --keep-going --jobs=72 O=/home/dan.rue/.cache/tuxmake/builds/3/tmp ARCH=arm64 CROSS_CO
MPILE=aarch64-linux-gnu- HOSTCC=clang-10 CC=clang-10 defconfig
make --silent --keep-going --jobs=72 O=/home/dan.rue/.cache/tuxmake/builds/3/tmp ARCH=arm64 CROSS_CO
MPILE=aarch64-linux-gnu- HOSTCC=clang-10 CC=clang-10
```

Build artifacts are saved in ~/.cache/tuxmake/

```
$ ls /home/dan.rue/.cache/tuxmake/builds/1
build.log bzImage config metadata.json modules.tar.gz
$ head -15 metadata.json
{
  "build": {
    "targets": [
      "config",
      "kernel",
      "modules",
      "dtbs"
    ],
    "target_arch": "x86_64",
    "toolchain": "gcc",
    "wrapper": "none",
    "environment": {},
    "kconfig": "defconfig",
    "kconfig_add": [],
    "jobs": 72,

```

Supported architecture/toolchain combinations

```
$ tuxmake --print-support-matrix
```

	arc	arm	arm64	i386	mips	riscv	x86_64
clang	yes	yes	yes	yes	yes	yes	yes
gcc	yes	yes	yes	yes	yes	yes	yes

```
$ tuxmake --print-support-matrix --runtime docker
```

	arc	arm	arm64	i386	mips	riscv	x86_64
clang	no	yes	yes	yes	yes	yes	yes
clang-10	no	yes	yes	yes	no	yes	yes
clang-8	no	yes	yes	yes	no	yes	yes
clang-9	no	yes	yes	yes	no	yes	yes
gcc	yes	yes	yes	yes	yes	yes	yes
gcc-10	no	yes	yes	yes	no	yes	yes
gcc-8	no	yes	yes	yes	yes	yes	yes
gcc-9	yes	yes	yes	yes	no	no	yes

```
$
```

Hi, the following build fails for me.

```
tuxmake -r docker -a arm64 -t clang-10 -k defconfig
```

Getting Started

- Current status: Alpha
- 'pip3 install tuxmake'
- Debian packages coming soon
- Project location: <https://gitlab.com/Linaro/tuxmake>
- Feature requests: <https://gitlab.com/Linaro/tuxmake/-/issues>

Introducing TuxBuild

- Fully managed service by Linaro
- Open source command-line client; closed-source back end
- Solves the build capacity problem
- Provides TuxMake “as-a-service”
- Cloud-native highly concurrent Linux kernel building service
- Easy to integrate with CI or developer workflows
- Used in production by LKFT since January 2020
- Supports individual builds as well as build sets
- Interface and features similar to TuxMake’s
 - gcc 8/9/10, clang 8/9/10
 - Arm64, arm, x86_64, i386, mips, arc, riscv

TuxBuild Example

```
$ tuxbuild build --git-repo 'https://git.kernel.org/pub/scm/linux/kernel/git/torvalds/linux.git' -  
-git-ref master --target-arch arm64 --kconfig defconfig --toolchain clang-10  
Building Linux Kernel https://git.kernel.org/pub/scm/linux/kernel/git/torvalds/linux.git at master  
⌚ Queued: arm64 (defconfig) with clang-10 @ https://builds.tuxbuild.com/aU0afv8mBPYHcr_oJ7gryQ/  
🌧 Building: 7eac66d0456f ("Merge tag 'vfio-v5.9-rc2' of git://github.com/awilliam/linux-vfio") ar  
m64 (defconfig) with clang-10 @ https://builds.tuxbuild.com/aU0afv8mBPYHcr_oJ7gryQ/  
🐛 Pass (8 warnings): 7eac66d0456f ("Merge tag 'vfio-v5.9-rc2' of git://github.com/awilliam/linux-  
vfio") arm64 (defconfig) with clang-10 @ https://builds.tuxbuild.com/aU0afv8mBPYHcr_oJ7gryQ/
```
