Suspend/Resume Quality, and Performance

Friday, 28 August 2020 10:25 (25 minutes)

sleepgraph is an open source tool in the pm-graph project:
https://01.org/pm-graph

sleepgraph has helped us improve both Linux suspend/resume quality and performance over the last few years.

In this session we will review the capabilities of the tool, so that you will be able to run it and understand its results. We will also highlight some of the areas where it shows we can improve Linux.

I agree to abide by the anti-harassment policy

I agree
