

## BoF: Core Scheduling API

*Wednesday 26 August 2020 07:00 (45 minutes)*

The goal of this discussion is to bring some of the discussions from LKML to a room where some of us can get together, figure out what interface makes sense for initial merging into upstream, what future goals are. Are cgroups the way forward, or should coreschedfs be a thing?

We want to follow this up with

Core Scheduling: Cross CPU priority comparison

Core Scheduling load balancing has been one of the corner cases that still has to be resolved. While we have the attention of the core group, we want to try to resolve this issue, and get to a point where we can have fixes and have a clear path ahead to merging.
